

Build Steps

Part 1 of 5 · Set up your agent in the new builder

1 Create your agent

Open Copilot Studio (copilotstudio.microsoft.com), select **Create**, then **New agent**. In the redesigned builder everything lives under the **Build** tab, with a settings panel down the right. Set:

Agent name Store Ops Daily Copilot

Description A daily store-operations sidekick: sales vs target, footfall, conversion, NPS movement, staffing gaps and top product gaps, and it drafts the daily store stand-up note.

Solution / Environment Consumer Experience · Default environment

Icon Use a recognisable colour and emoji, or upload a brand icon

2 Choose your model

Open the **Model** selector at the top of the right-hand panel. Copilot Studio now lets you pick the model your agent reasons with. This build uses **Claude Sonnet 4.6**; you can switch later without rebuilding.

Reasoning is built in

- The agent reasons over your instructions, knowledge, skills and tools, and decides what to do each turn
- Handles paraphrases, multi-step asks and follow-ups
- Blends a knowledge lookup with a tool call in one reply
- Calls the right skill when intent matches

Choosing a model

- Claude Sonnet 4.6: strong reasoning, a good default here
- Lighter models: lower latency and cost for simple, high-volume flows
- Switch the model and re-run the same evaluation set to compare
- Check data residency and model availability for your tenant

3 Write your instructions

The **Instructions** box is the heart of the Build tab. Define the agent's role, audiences and rules here. The agent reasons over these together with everything in the right-hand panel. Paste:

You are the Store Ops Daily Copilot. You help two audiences:

- 1) Store managers running today's stand-up.
- 2) Regional managers comparing performance across stores.

Rules:

- Use the uploaded store ops dataset as your single source of truth.
- Keep replies brisk and action-led; managers are on the shop floor.
- For every store metric, lead with movement vs target (the 'so what').
- For the daily stand-up draft, call the 'Send Stand-up Note to Teams' tool rather than producing it as plain text.
- Flag any store where SalesVsTargetPct is below -10% or StaffOnShift is below StaffRequired.
- Treat staffing data as confidential: managers see their store, regionals see their patch.

Build Steps

Part 2 of 5 · Ground it in your data

4 Add Knowledge

Open **Knowledge** in the panel, select **Add knowledge**, then **File**, and upload **Consumer_StoreOps_Data.xlsx**. Knowledge gives the agent trusted context to guide its answers. This file contains:

- Store metadata (store ID, store name, date)
- Traffic and sales (footfall count, conversion %, sales USD, sales vs target %)
- Customer signal (NPS score)
- Staffing (staff on shift, staff required, top gap, free-text stand-up note)

Layer more sources later: SharePoint sites, Dataverse, Microsoft Graph connectors, or public web.

5 Bring in Microsoft IQ

Open **Microsoft IQ** in the panel. Microsoft IQ brings in work context, business data and app signals from across your tenant, so the agent grounds answers in more than the file you uploaded.

For this agent, Microsoft IQ pulls the store's Teams channel and roster signals, so a staffing gap reflects today's actual shift rather than a planned rota. Microsoft IQ honours each user's existing permissions, so the agent only surfaces what the signed-in user is already allowed to see.

Build Steps

Part 3 of 5 · Give it skills and tools

6 Add a Skill

Open **Skills** in the panel, then **Add a skill**. A skill defines a reusable behaviour through structured instructions. It is the new home for the conversational flows you used to build as topics: the agent calls the skill when a user's intent matches.

Skill name: Draft Today's Store Stand-up

Description: Pulls today's store row, drafts a four-line stand-up note (sales vs target, conversion, NPS movement, top gap) and offers to post it to the store's Teams channel.

When to use it (intent hints the agent reasons over):

- Draft today's stand-up
- Stand-up note for store 014
- Write the morning brief
- Give me today's store update

Structured steps:

- Identify the store (default to the signed-in user's store) and today's date
- Pull today's row plus yesterday's row for comparison
- Compose four lines: sales vs target, conversion movement, NPS movement, top gap
- Read the draft back to the manager and allow one round of edits
- Call 'Send Stand-up Note to Teams' to post it into the store's team channel
- Confirm the message link returned by the tool

7 Add a Tool

Open **Tools**, then **Add a tool**. **Skills decide what to do; tools take the action**. A tool is a typed, callable action with named inputs and outputs that the model fills from the conversation. Choose one of: a **prebuilt connector** (Outlook, Teams, SharePoint, Dataverse, ServiceNow and more), a **Power Automate cloud flow**, a **custom HTTP request**, or a **Model Context Protocol (MCP) server**. This build uses the Teams connector with a SharePoint archive write, because it does two things in one call: post the note and file a copy the team can refer back to.

Tool name: Send Stand-up Note to Teams

Type: Microsoft Teams connector (Post message in channel), plus a SharePoint archive write

Description (the model reads this to decide when to call): Posts the daily stand-up note as an adaptive card in the store's Teams channel and archives it to the store ops SharePoint library.

Inputs the agent collects or infers:

- storeId — text, from the authenticated user
- date — text, defaults to today
- headlineMetric — text, typically Sales vs target %
- standupBody — text, four-line markdown string
- topAction — text, the top action for the day

Outputs returned to the agent:

- messageLink — text, e.g. <https://teams.microsoft.com/l/message/...>
- archiveUrl — text, the SharePoint copy the manager can re-share
- status — text, e.g. Posted

7.1 · Build the cloud flow that does the work

From inside Copilot Studio choose **Tools > Add a tool > New > Power Automate**. This opens the flow designer pre-wired with the Copilot Studio trigger and, crucially, keeps the flow in the **same environment** as your agent (Consumer Experience · Default). An environment mismatch is the most common reason a finished tool never appears in the picker, so confirm the environment switcher (top-right) before you build.

Trigger — *When an agent calls the flow*. Add five text input parameters, named exactly: `storeId`, `date`, `headlineMetric`, `standupBody`, `topAction`.

- **Action 1 – post the card**. Microsoft Teams *Post card in a chat or channel* to the store's channel, using an adaptive card that shows the date, headline metric, the four-line body and the top action for the day.
- **Action 2 – capture the link**. Read the posted message URL from the Teams action output into a variable `messageLink` so the manager can jump straight back to it.
- **Action 3 – archive the note**. SharePoint *Create file (or Create item)* into the **Store Ops Stand-ups** library. Map: Name = `concat(storeId, '-', date)`, Body = `standupBody`, Headline = `headlineMetric`, Action = `topAction`.
- **Final action – return to the agent**. Add *Respond to the agent* (Return value(s) to Copilot Studio) with outputs `messageLink = variables( 'messageLink' )`, `archiveUrl = the SharePoint item URL`, `status = 'Posted'`.
- **Save** the flow as CX – Send Stand-up Note.

7.2 · Register and map the tool in your agent

- Back in Copilot Studio the flow is attached automatically; if you built it separately, **Tools > Add a tool > Flows** and select it.
- Set the display name to **Send Stand-up Note to Teams** and write the **Description** for the model — it is what the agent reads to decide when to call the tool.
- For each input set **Fill using**: `storeId` → *dynamically* from `System.User.Store`; `date` defaults to today; `headlineMetric`, `standupBody` and `topAction` → **Fill with AI**, and add an input description so the model passes the lines the skill drafted (for `standupBody`, specify the four-line order).
- Confirm `messageLink` is returned to the agent so the skill can read it back — satisfying your instruction rule to post via the tool rather than print plain text.
- **Connection & auth**: set the Teams and SharePoint connections the flow uses. The connectors chosen here are exactly what your DLP policy must permit (see Step 10).

7.3 · Worked example — what flows in and out

When a manager says “draft and send today's stand-up for store 014”, the model fills the inputs and calls the tool with this payload:

```
{
  "storeId": "014",
  "date": "2026-06-08",
  "headlineMetric": "Sales vs target -12%",
  "standupBody": "Sales -12% · Conversion +1.4pt · NPS +3 · 2 short on tills",
  "topAction": "Pull one associate to checkout for the lunch peak"
}
```

The flow posts the card, archives a copy, and returns:

```
{
  "messageLink": "https://teams.microsoft.com/l/message/19:store014/1749...",
  "archiveUrl": "https://contoso.sharepoint.com/StoreOps/014-2026-06-08",
  "status": "Posted"
}
```

The agent then replies in natural language, quoting the real link: “Posted today's stand-up for store 014 to your Teams channel (sales -12% vs target) and archived a copy — here's the message: teams.../1749.”

7.4 · Test the tool before you trust it

- **In isolation:** open the flow in Power Automate, choose *Test > Manually*, supply the five inputs, run it, and confirm an adaptive card posts to the channel, a copy lands in the SharePoint library, and the run returns all three outputs.
- **End to end:** in **Preview** (Step 11) type “draft and send today's stand-up for store 014” and check the activity view shows Send Stand-up Note to Teams firing with the inputs the model inferred and the message link it read back.

Build Steps

Part 4 of 5 · Extend, remember and govern

8 Add Connected agents

Open **Connected agents**. A connected agent lets this agent collaborate with others, delegating specialist work and sharing context across them (agent-to-agent). Keep each agent focused on what it does best.

Connect a **Scheduling Agent** so a flagged staffing gap can be actioned in the same conversation, asking the rota agent to surface available cover rather than ending at the alert.

9 Turn on Memory

Toggle **Memory** on. Memory lets the agent remember interactions, workflows and context across sessions, so returning users do not have to repeat themselves. For this agent it remembers:

- The manager's store and preferred stand-up format, so the draft opens correctly
- Yesterday's note, so today's movement is framed against it

Memory is scoped to each user and follows your retention and DLP policy. Review what the agent retains before you publish.

10 Govern your agent

Open the agent settings and lock these down before real users arrive:

Authentication: use *Authenticate with Microsoft (Entra)* so the agent runs as the signed-in user and inherits their permissions.

Content moderation: set the moderation level (start at Medium) and review it for your audience.

Data loss prevention: confirm your DLP policy covers every connector your tools use — for Send Stand-up Note to Teams that means the Teams and SharePoint connectors must sit in the same DLP group, or the tool is blocked at runtime.

Channels and access: review which channels are enabled and who can use the agent.

Build Steps

Part 5 of 5 · Preview, evaluate and publish

11 Preview your agent

Switch to the **Preview** tab to chat with your agent as you build. Open the **activity view** on any response to inspect:

- Which skill, tool or knowledge source fired, and in what order
- The inputs the agent collected and the exact payload each tool returned
- Citations linking each answer back to a row of your data
- Latency per step, useful when tuning multi-tool flows

12 Evaluate

Open the **Evaluate** tab, then **New evaluation**. Build a test set so you can measure quality before and after every change. Score each response on **groundedness** (did it stay inside the knowledge), **relevance** (did it address the question), and **accuracy** (did it match the expected outcome).

Test set: Store Ops Daily Copilot · Baseline v1

Input: Which stores are below -10% vs target today?

Expect: Filters where SalesVsTargetPct is below -10 for today; cites StoreID and StoreName.

Input: Show the NPS movement for store 014 over the last week

Expect: Returns store 014 rows for the last 7 days, calculates day-over-day NPS deltas.

Input: Draft and send today's stand-up for store 014

Expect: Triggers the Draft Today's Store Stand-up skill and calls Send Stand-up Note to Teams.

13 Publish and Monitor

Click **Publish**, then enable the channels your users live in: Microsoft Teams, Microsoft 365 Copilot, a custom website embed, or other channels. Teams and M365 Copilot need tenant admin approval, so plan for that lead time. After publishing, open the **Monitor** tab to watch sessions, resolution and escalation outcomes, and quality trends over time, and to see where users drop off.

Try These Live

Sample queries to test your agent during the build-along.

Today's Snapshot

How is store 014 tracking vs target so far today? · Which stores are below -10% vs target today?

Trends & Comparisons

Show NPS movement for store 014 over the last week. · Which store has the biggest staffing gap this week?

Governed Action

Draft and send today's stand-up for store 014.

Try a paraphrase: 'fire off the morning huddle note for my store'.

How to Think About This Agent

This agent replaces	With
• Manually pulling sales vs target from the BI portal • Re-typing the stand-up note into Teams every morning • Multiple chat threads chasing daily numbers	✓ Today's numbers and movement in chat ✓ Daily stand-up drafted and posted in one turn ✓ Cross-store comparisons for regional managers

Trusted, governed, enterprise AI.

Built once, used everywhere.

Tip for real-world use

Publish to Teams mobile first; store managers run their stand-ups from the shop floor, not a desk. Add a Power BI link in the adaptive card so the team can drill into any metric the stand-up mentions without leaving Teams.

You've built a Copilot Studio agent ✓

You now have an AI agent that can:

- Draft daily stand-up notes
- Compare today vs target instantly
- Surface stores at risk vs target
- Keep the floor moving on the right action
