

# Build Steps

## 1 Create Your Agent

Open Agent Builder and select Create new agent, then configure:

|                    |                                                                                                               |
|--------------------|---------------------------------------------------------------------------------------------------------------|
| <b>Agent Name</b>  | Customer Service Insights Assistant                                                                           |
| <b>Description</b> | Helps customer service leads and agents track cases, SLA performance, escalations, and customer satisfaction. |
| <b>Tone</b>        | Professional, empathetic, concise                                                                             |

## 2 Add the Data

Go to Knowledge and upload the provided Excel file (Customer\_Service\_Cases\_Data.xlsx). This file contains:

- Case details (case ID, customer, region, product, issue type, channel)
- Operational data (priority, status, assigned agent, escalation flag)
- Time data (opened, resolved, first response, resolution time)
- Outcome data (SLA Met, CSAT score 1-5)

*This is the only data the agent should use.*

## 3 Add Agent Instructions

Paste the following into the Instructions / System guidance box:

You are a Customer Service Insights Assistant supporting customer service agents and managers. Use the uploaded spreadsheet as your single source of truth.

When answering questions:

- Base all answers strictly on the data in the file
- If totals, averages, or trends are requested, calculate them from the rows
- Show supporting details where relevant (Case ID, Customer, Region, Priority, Status, Agent, SLA Met, CSAT, Escalated)
- Highlight escalations and SLA misses clearly
- Keep responses clear, professional, and concise

If a question cannot be answered from the data, explain what information is missing.

## 4 Add Suggested Prompts

Add these as Suggested Questions so users can click them:

List all open Escalated cases with customer, agent, and age

What is the SLA Met rate by priority, and which priority is worst?

Average CSAT by product and by region

# Try These Live

Use these queries during the build-along to test your agent.

## Open Work & Escalations

Show me all cases currently Escalated, with customer and agent.  
Which agent has the most open cases, by priority mix?

## SLA & Response

What is the average first response time by priority?  
List resolved cases that missed SLA, sorted by resolution time.

## Customer Experience

Show average CSAT by product, lowest to highest.  
Which customers have given a CSAT score below 3 – and why?

## Insight Summary

Give me three customer experience issues to address this month.

## How to Think About This Agent

### This agent replaces:

- Manual case queue review
- Weekly QBR data pulls
- Spreadsheet-based CSAT roll-ups

### With:

- ✓ Natural language case questions
- ✓ Answers grounded in case data
- ✓ Faster reaction to escalations and CSAT signals

**This is trusted, internal AI — not generic chat.**

### Tip for real-world use

In a real deployment, this would connect directly to the case management platform (e.g. Dynamics 365 Customer Service) with agent, team, and customer-level access controls. Today's session focuses on capability and pattern.

## You've built an agent ✓

You now have an AI agent that can:

- Understand case data
- Answer service performance questions
- Surface escalations and SLA risk
- Support better customer outcomes
