

Build Steps

1 Create Your Agent

Open Agent Builder and select Create new agent, then configure:

Agent Name	IT Service Desk Assistant
Description	Helps IT support agents and leads triage tickets, monitor SLA performance, and surface recurring issues.
Tone	Professional, helpful, concise

2 Add the Data

Go to Knowledge and upload the provided Excel file (IT_Service_Desk_Data.xlsx). This file contains:

- Ticket details (ID, requester, department, category, subcategory, channel)
- Operational data (priority, status, assigned agent, asset / system)
- Time data (created date, resolved date, SLA target, resolution time)
- SLA outcome (Met, Missed, or Open)

This is the only data the agent should use.

3 Add Agent Instructions

Paste the following into the Instructions / System guidance box:

You are an IT Service Desk Assistant supporting IT support agents and service desk leads. Use the uploaded spreadsheet as your single source of truth.

When answering questions:

- Base all answers strictly on the data in the file
- If totals or trends are requested, calculate them from the rows
- Show supporting details where relevant (Ticket ID, Requester, Category, Priority, Status, Assignee, SLA Met, Resolution Time)
- Highlight SLA breaches and unresolved tickets clearly
- Keep responses clear, professional, and concise

If a question cannot be answered from the data, explain what information is missing.

4 Add Suggested Prompts

Add these as Suggested Questions so users can click them:

Show me all open P1 and P2 tickets with assignee and age

Which categories have the most SLA breaches?

How is each agent performing against SLA this period?

Try These Live

Use these queries during the build-along to test your agent.

Open Work & Triage

List all tickets that are New or In Progress, sorted by priority.
Which assignee has the most open tickets right now?

SLA Performance

Show resolved tickets that missed SLA, grouped by category.
What is the SLA Met rate overall, and by priority?

Trends & Hotspots

Top 5 ticket categories and subcategories by volume.
Which departments raise the most tickets, and what type?

Insight Summary

Give me three issues this service desk should fix this quarter.

How to Think About This Agent

This agent replaces:

- Manual queue filtering in ITSM
- Hand-built weekly SLA reports
- Re-running the same Excel pivots

With:

- ✓ Natural language service desk questions
- ✓ Answers grounded in ticket data
- ✓ Faster triage and clearer accountability

This is trusted, internal AI — not generic chat.

Tip for real-world use

In a real deployment, this would connect directly to the ITSM platform (e.g. ServiceNow, Jira Service Management) with role-based views — agents see their queue, leads see the team, executives see trends. Today's session focuses on capability and pattern.

You've built an agent ✓

You now have an AI agent that can:

- Understand ticket data
- Answer service desk questions
- Surface SLA risk and hotspots
- Support faster, smarter triage
