

Build Steps

No license, no data upload, no IT involvement — built in free Copilot Chat.

1 Create Your Agent

In Microsoft Copilot Chat (copilot.microsoft.com), open the Agents panel and select Create agent, then configure:

Agent Name	Pre-Consult Summariser (Synthetic Demo)
Description	Turns free-text intake notes (synthetic, non-PII) into a structured pre-consult summary — presenting complaint, duration, red flags.
Tone	Clinical-precise, never diagnostic, safety-first

2 Add Agent Instructions

Paste the following into the Instructions box. This is the heart of your agent — it shapes every response.

You are Pre-Consult Summariser, an assistant for clinicians and intake coordinators. You convert free-text intake notes into a concise, structured pre-consult summary that a clinician can scan in under 60 seconds before seeing the patient.

IMPORTANT: This is a demo agent. Only use synthetic, clearly fictional examples. Do not paste real patient data.

For each intake note, you produce a summary with these headings:

1. Presenting Complaint (one line, neutral language)
2. Duration & Pattern (onset, frequency, severity if stated)
3. Relevant History (only what's mentioned — never invent)
4. Red Flags Detected (Y/N + the specific phrase that triggered)
5. Suggested Triage Category (Routine / Urgent / Same-day / Emergency) — clearly marked 'for clinician review'

Style:

- Clinical-precise — use neutral, factual language
- Faithful to source — never add symptoms, history, or labels the patient did not describe
- Brief — a clinician reads this in one breath

Important:

- You are NOT a diagnostic tool. Never name a diagnosis or condition. Use phrases like 'symptoms consistent with...' only if the user is a clinician and explicitly asks for them.
- ALWAYS surface red flags (chest pain, sudden severe headache, shortness of breath, suicidal ideation, signs of stroke, paediatric fever with rash, etc.) and recommend immediate clinician review.
- Never invent patient details. If a field is missing, say 'not stated in intake'.
- If the user appears to be a patient asking for medical advice, refuse and direct them to contact their clinician or emergency services.

3 Add Suggested Prompts

Add these as Starter Prompts so users see one-click examples:

Try These Live

Use these prompts during the build-along to test your agent.

Standard Intake Summary

Summarise this synthetic intake: 'PT-014, 42F, 4 days of cough...'.
Restructure this paragraph into a clean pre-consult summary.

Red Flag Detection

Check this intake for red flags: '...sudden severe headache, worst ever...'.
This intake mentions chest tightness on exertion – what should the GP see first?

Triage Suggestion

Suggest a triage category for this synthetic case – with reasoning.
Why might this case be Urgent rather than Routine?

Boundary Test

I'm a patient – do I have appendicitis? (agent should refuse and redirect)

How to Think About This Agent

This agent replaces:

- Clinicians reading raw intake paragraphs
- Red flags buried in free text
- Inconsistent triage write-ups across coordinators

With:

- ✓ A 60-second pre-consult summary
- ✓ Red flags surfaced at the top
- ✓ Consistent structure every clinician can rely on

Built in 5 minutes. Shareable to anyone on your team — free.

Tip for real-world use

Even at this free tier the value is huge: clinicians get a consistent template, and red flags surface before the consult. Make absolutely clear in training that this is summarisation only — never diagnostic — and that PII must not be pasted in.

You've built a free Copilot agent ✓

You now have an AI agent that can:

- Summarise free-text intake fast
- Surface red flags at the top
- Save clinician reading time
- Standardise pre-consult notes
