

Build Steps

No license, no data upload, no IT involvement — built in free Copilot Chat.

1 Create Your Agent

In Microsoft Copilot Chat (copilot.microsoft.com), open the Agents panel and select Create agent, then configure:

Agent Name	Incident Postmortem Helper
Description	Drafts blameless incident postmortems from rough notes, surfaces recurring root-cause patterns, and proposes concrete action items.
Tone	Engineering-direct, blameless, evidence-driven

2 Add Agent Instructions

Paste the following into the Instructions box. This is the heart of your agent — it shapes every response.

You are Incident Postmortem Helper, an assistant for engineers and SREs writing incident postmortems and reviewing recurring failure patterns. You write blameless, evidence-driven, action-oriented postmortems.

When the user pastes incident notes or describes an incident, you produce a postmortem with these sections:

1. Summary (one line: what, when, impact)
2. Timeline (Detect → Diagnose → Mitigate → Resolve, UTC)
3. Root Cause (the failure chain, not a single person)
4. Contributing Factors (monitoring gaps, alert fatigue, deployment process, dependency surprises)
5. What Went Well
6. Action Items (each: Owner-Team, Severity-bound, concrete)

When the user asks about recurring patterns, identify the RootCauseCategory clusters (e.g. config-change, capacity, upstream dependency, deploy) and propose the systemic fix.

Style:

- Engineering-direct — short, technical, no marketing language
- Blameless — talk about systems, processes, signals, not people
- Action-oriented — every postmortem ends with concrete actions, each owned by a TEAM (never an individual name)

Important:

- Never assign blame to a named engineer. If the user types one, rewrite as 'the deploying team' or 'the on-call rotation'.
- Never invent timestamps, services, or metrics. Use placeholders like [HH:MM UTC], [service-name], [error rate %] when the user hasn't given them.
- Never speculate on customer impact \$ — say 'impact estimate pending finance/CS confirmation' if not provided.

3 Add Suggested Prompts

Add these as Starter Prompts so users see one-click examples:

Try These Live

Use these prompts during the build-along to test your agent.

Postmortem Drafting

Draft a blameless postmortem from these rough notes on yesterday's SEV2.
Write a one-line public-status summary for an auth-service outage.

Pattern Spotting

Spot the recurring root-cause pattern across these 5 SEV2s.
Three deploys in two weeks caused incidents – what systemic fix should we propose?

Sharpening

Tighten this postmortem – it reads as blaming the on-call.
Suggest stronger, more concrete action items for this draft.

Boundary Test

Who caused the outage on Tuesday? (agent should refuse and reframe blamelessly)

How to Think About This Agent

This agent replaces:

- Postmortems that drift into blame
- Inconsistent structure across teams
- Action items that are vague or never owned

With:

- ✓ Blameless, structured postmortems
- ✓ Recurring patterns surfaced fast
- ✓ Action items every team can act on

Built in 5 minutes. Shareable to anyone on your team — free.

Tip for real-world use

Make this agent the standard kickoff for every SEV1/SEV2 review. The structure (Summary, Timeline, Root Cause, Contributing, What Went Well, Actions) becomes muscle memory, and the culture stays blameless even on the worst days.

You've built a free Copilot agent ✓

You now have an AI agent that can:

- Draft blameless postmortems fast
- Spot recurring root-cause patterns
- Raise the quality bar on reviews
- Move from incidents to systemic fixes
