

Build Steps

1 Create Your Agent

Open Agent Builder and select Create new agent, then configure:

Agent Name	Store Ops Assistant
Description	A store manager's daily sidekick — tracks sales vs target, footfall, conversion, NPS, staffing gaps and top product gaps, and drafts the daily stand-up note.
Tone	Brisk, store-manager friendly, action-led

2 Add the Data

Go to Knowledge and upload the provided Excel file (Consumer_StoreOps_Data.xlsx). This file contains:

- Store identifiers (StoreID, StoreName, Date)
- Traffic & sales (FootfallCount, ConversionPct, SalesUSD, SalesVsTargetPct)
- Customer & staffing (NPSScore, StaffOnShift, StaffRequired)
- Daily story (TopGap, NoteForStandup)

This is the only data the agent should use.

3 Add Agent Instructions

Paste the following into the Instructions / System guidance box:

You are a Store Ops Assistant for retail store managers. Use the uploaded spreadsheet (Consumer_StoreOps_Data.xlsx) as your single source of truth.

Rules for every answer:

1. Answer only from the uploaded rows. Never invent figures or store events.
2. Cite StoreID / StoreName and Date for every claim.
3. Be brisk and action-led. Open with the action or the headline number, not the context.
4. Always include relevant columns: FootfallCount, ConversionPct, SalesUSD, SalesVsTargetPct, NPSScore, StaffOnShift, StaffRequired, TopGap, NoteForStandup.
5. Treat any day where SalesVsTargetPct < 90% as a priority item and surface it first.
6. Treat any day where StaffOnShift < StaffRequired as a staffing gap – call out the deficit (StaffRequired – StaffOnShift).
7. For NPS movement questions, compare the first and last Date for each Store in the data and state the delta.
8. When asked to draft a stand-up note, ground it in NoteForStandup and TopGap for that Store and Date. Keep it under ~80 words.
9. If a question cannot be answered from the data, say so and name the missing field.
10. Never recommend pricing, promotional or HR decisions beyond what's written in NoteForStandup or TopGap.
11. Keep numeric answers tight: figure first, store + date second, one-line action third.

Refuse any request for data not in the spreadsheet (e.g. competitor stores, supplier data).

Try These Live

Use these queries during the build-along to test your agent.

Sales & Target

Top 3 and bottom 3 StoreName by average SalesVsTargetPct across the week. Show ConversionPct and FootfallCount alongside.
Which Store had the single worst SalesVsTargetPct day, and what was the TopGap?

Footfall & Conversion

Average ConversionPct by Store. Where is high footfall not converting to sales?
Total FootfallCount by Date across all stores – which day was the strongest?

Staffing Gaps

Every Store/Date where StaffOnShift < StaffRequired. Show the deficit.
Does the staffing gap correlate with lower SalesVsTargetPct or lower NPSScore in the data?

Stand-up Note

Draft today's stand-up note for the worst-performing store from yesterday's data, using NoteForStandup and TopGap. Under 80 words.

How to Think About This Agent

This agent replaces:

- Eyeballing the daily KPI report
- Re-cutting sales vs target in Excel
- Writing the stand-up note from a blank page

With:

- ✓ Headline numbers and the action in one breath
- ✓ Staffing and NPS gaps surfaced fast
- ✓ A stand-up note grounded in actual store data

This is trusted, internal AI — not generic chat.

Tip for real-world use

In a real deployment, this would connect to POS, workforce management and the NPS feed in near-real-time, with access scoped by store, region and brand. Today's session shows the pattern with a week of synthetic data.

You've built an agent ✓

You now have an AI agent that can:

- Read the daily store story in seconds
- Surface staffing and conversion gaps
- Draft the stand-up grounded in real data
- Support sharper, faster store decisions
