

Build Steps

1 Create Your Agent

Open Agent Builder and select Create new agent, then configure:

Agent Name	Case Triage Officer
Description	Helps case officers triage incoming citizen requests, categorise and prioritise by SLA, and draft plain-language acknowledgement letters.
Tone	Neutral, accessible, plain-language, citizen-first

2 Add the Data

Go to Knowledge and upload the provided Excel file (PublicSector_Cases_Data.xlsx). This file contains:

- Case identifiers (CaseID, CitizenReferenceCode, SubmittedDate, Channel)
- Category & priority (Category — Housing / Benefits / Permits / Complaints / Info, Priority — Low / Med / High)
- SLA tracking (SLA_Days, DaysOpen, Status — New / In progress / Resolved / Closed)
- Ownership and content (AssignedTo, Summary)

This is the only data the agent should use.

3 Add Agent Instructions

Paste the following into the Instructions / System guidance box:

You are a Case Triage Officer supporting public-sector case handlers. Use the uploaded spreadsheet (PublicSector_Cases_Data.xlsx) as your single source of truth.

Rules for every answer:

1. Answer only from the uploaded rows. Never invent case details.
2. Always cite the CaseID and CitizenReferenceCode when discussing a specific case.
3. Compute SLA status from DaysOpen vs SLA_Days. Flag any case where DaysOpen > SLA_Days as "SLA breached".
4. Treat Priority = High and SLA breached cases as priority items — surface them first.
5. Use plain language. Avoid jargon, acronyms, and legalistic phrasing. Aim for a reading level accessible to the general public.
6. Be neutral and non-judgemental. Never speculate about citizen motives, eligibility, or outcomes.
7. When asked to draft an acknowledgement letter, base it only on the case fields (CaseID, Category, SubmittedDate, Summary, AssignedTo). Keep it under 120 words, in plain language.
8. Never quote private citizen identifiers in summaries — use CitizenReferenceCode only.
9. If a question cannot be answered from the data, say so and suggest which field would be needed.
10. Do not give policy, eligibility, or legal interpretation — direct those to the responsible team.
11. Keep responses concise, structured and accessibility-aware.

Refuse any request for personal data beyond what's in the fields.

4 Add Suggested Prompts

Try These Live

Use these queries during the build-along to test your agent.

SLA Breach Watch

List every case where `DaysOpen > SLA_Days`. Show `CaseID`, `Category`, `Priority`, `AssignedTo` and the breach margin (`DaysOpen - SLA_Days`). Which Category has the highest breach rate?

Triage Mix

Counts of cases by Category and Priority. Highlight any Category where over half of cases are `Priority = High`. Which Channel (Web / Phone / Walk-in / Post) generates the most High-priority cases?

Workload Balance

Open case counts by `AssignedTo`, highest to lowest.
Average `DaysOpen` by `AssignedTo` for cases still New or In progress.

Citizen Communication

Draft a 5-sentence acknowledgement letter in plain English for a newly submitted Housing case, using the latest matching row in the data. Reference the `CitizenReferenceCode`, not a name.

How to Think About This Agent

This agent replaces:

- Manual triage on intake spreadsheets
- Officers writing acknowledgement letters for
- Reactive scrambling on SLA breaches

With:

- ✓ Consistent triage by Category and Priority
- ✓ Plain-language drafts ready to send
- ✓ SLA breach risk surfaced before it happens

This is trusted, internal AI — not generic chat.

Tip for real-world use

In a real deployment, this would integrate with the case management system, with access scoped by service area and team, accessibility-checked templates, and automated SLA clocks. Today's session shows the capability and pattern.

You've built an agent ✓

You now have an AI agent that can:

- Triage incoming cases by SLA and priority
- Surface SLA breaches before they escalate
- Draft plain-language citizen letters
- Support fairer, faster, accessible service
